

# TASK MANAGEMENT FOR CONNECTED TEAMS TEAM KONNECT

## TEAM KONNECT ASSET MANAGEMENT

### TEAM KONNECT ASSET MANAGEMENT

In any asset intensive industry, equipment downtime and poorly performing assets can have a significant impact on an organisation's bottom line. The maintenance of these assets is not only important from a productivity point of view, but also because of the significant health and safety implications of any failure. When you consider how the negative performance of your assets could also impact business productivity there are plenty of reasons to invest in asset management solutions.

The Team Konnect Asset Management platform enables organisations with the tools to manage all their assets in a structured manner providing visibility and access to the most important information relating to every asset.

Each asset purchase is recorded within the Asset Management module capturing all related information such as supplier asset category and price. Assets that require validation can have expiry dates set that notify management to maintain compliance. Certificates of compliance can also be uploaded and attached to each asset for easy reference.

Why not contact us today to arrange for a demonstration of our Team Konnect Asset Management platform.

## MANAGING ASSETS EFFECTIVELY AND COMPLIANTLY

Businesses from every industry can benefit from the power that an asset management solution can bring to the organisation. With a proper solution in place, organisations can make more informed decisions by enhancing the predictive maintenance of each asset and its supply chain. The life of an asset can be prolonged minimising maintenance costs and you can also ensure that your assets comply with the various industry regulations and legislative requirements applicable.

The Team Konnect Asset Management platform has been designed to eliminate the headache of asset management. Managers can now manage all their assets in one central location capturing and controlling all aspects of an asset throughout its lifecycle.

Assets can be scheduled for daily, weekly or monthly checks using the Team Konnect checklist module to meet compliance, identify repairs and minimise risk within the workplace. Asset tagging and location management is also a critical factor for some organisations as many assets may have to be moved from location to location overtime. A full repair history can be managed to identify trends in specific products and guide the organisation with better purchasing decisions. And documentation can be attached to each asset such as certificates of compliance, manuals and tacit information from expert workers that is generally lost within organisations.

Finally, all asset data collected is written into data lakes for consumption by PowerBI for Azure generating dynamic dashboards and providing visibility across all departments within the organisation.

# TEAM KONNECT ASSET MANAGEMENT

The Team Konnect Asset Management platform has been designed to offer organisations the maximum flexibility when it comes to asset management. Whether the requirement is to simply track the value of assets, their locations and who they have been assigned to or to manage more elaborate compliance requirements, Team Konnect has the features and capabilities to deliver.

However, Team Konnect goes one step further by taking Asset Management out into the field. With our uniquely designing mobile application organisations can now allow users to manage asset movements, repairs or even compliance using our checklist module even in 'Offline Mode' anywhere in the work.

Why not take a test drive of our Team Konnect Asset Management Platform and manage your assets in ways that you never thought possible.

## FEATURES

- ✘ Asset Record Management
- ✘ Asset Repairs Records
- ✘ Upload Asset Documentation
- ✘ Asset Compliance Monitoring
- ✘ Asset Checklist Management
- ✘ Asset Risk Mitigation
- ✘ Asset Movements
- ✘ Asset Valuation
- ✘ Asset Reporting

## BENEFITS

- ✘ Instant access to all asset records
- ✘ Manage all asset repair records
- ✘ Centrally maintain all asset documentation
